

23rd September 2026

CAS-613862-P0J7W2

Dear Resident,

Fox-A-Gon report on fox activity at Coppermill Heights

We're contacting you to provide you with an update following last week's reports of fox activity and the subsequent further inspection of the site by our contractor Fox-A-Gon. Fox-A-Gon visited the site on 17th September 2026 and carried out an inspection which identified two areas where foxes may have been able to gain access to the secured area. This is following these areas being secured by them to prevent access during a previous visit on 14th September 2026.

They have reported that that renewed access is likely due to some of the Heras fencing modifications to prevent access being disturbed. In addition, the mesh beneath one of the gates had been pushed or displaced, creating another potential access point.

Site has been re-secured

The damaged mesh and affected section of Heras fencing have now been repaired and re-secured. The site has also been fully checked and we've been advised that no further security requirements have been identified.

The area affected is accessible to a number of people, including site contractors and other authorised users. To ensure everyone is updated, we've shared the latest Fox-A-Gone report with our contractor Equans. They are aware of the importance of keeping these special site security measures in place and we've asked them to inform us if they see anything that has been moved.

If any of the temporary fencing, gates or associated exclusion measures are disturbed its possible foxes will access the site again, so please do report any further concerns to us.

Keeping measures under review

As the recent likely fox access points appear to have resulted from the temporary fencing and associated mesh being disturbed after installation, we've been advised that at this stage there is no indication that the security measures in place are not working as they should. However, we are keeping this under review.

We have contacted our daily cleaning team and asked them to address the fox fouling incidents reported by residents.

We appreciate your continued patience and cooperation while we monitor the situation and work to prevent further fox access to the area.

Kind regards,

The Special Projects Team
